

Iteration

- Functional programming supports Lamda/Closure.
- Prefer internal iteration to external iteration.

Iteration (Java)

```
List<Integer> numbers =  
    Arrays.asList(1, 2, 3, 4, 5, 6);  
//External Iteration  
for (Integer n : numbers)  
    System.out.println(n);  
//Internal iteration  
numbers.stream().forEach(  
    System.out::println);
```

Iteration (C#)

```
var numbers = new List<int>
    {1, 2, 3, 4, 5, 6};
//External Iteration
foreach (var e in numbers)
    Console.WriteLine(e);

//Internal iteration
numbers.ForEach(Console.WriteLine);
```
